Read the paragraph. Find the text and answer the questions.

Some dinosaurs were huge. But many were about the size of modern-day birds or dogs. Some smaller dinosaurs like the two-metre Troodon had fairly large brains. Tyrannosaurus rex was a powerful predator. Physically, many scientists feel it was too large to move quickly, and so resorted to scavenging. Dinosaurs disappeared about sixty-five million years ago. Scientists believe they died out because of global climate change.

1. Which dinosaur was a predator? _____
2. When did dinosaurs become extinct? _____
