Read the paragraph. Find the text and answer the questions.

There are many different types of insects and mini creatures around the world. You can find mosquitoes, cockroaches, scorpions, moths, caterpillars and lots more. Some insects live in houses, some insects produce poison and others transfer disease to humans through biting. Insects groom themselves to keep clean and stay healthy. Through grooming their antennas, insects are alert to danger and also maintain healthy breeding amongst their populations.

1. What do insects groom? _____
2. What do insects produce? _____
