Find the text in the maze!

Is our identity determined by our biological make up? Are we self-directed individuals or just slaves of our own genes? The question of 'nature versus nurture' leads us to this point. What if you were born an identical twin and separated at birth. Would you be different or similar to your sibling? We have heard of identical twins who were separated at birth and the similarities are striking. Married at the same age, having the same number of kids and quitting school at the same age.

1. What are genes? _____
2. What are siblings? _____
3. What is the 'nature versus nurture' debate about? _____
