Read the paragraph. Find the text and answer the questions.

Wild animals learn to grow up fast. Mammals like to drink milk from their mother. Tiger cubs love to play. They also like to pounce and leap onto their mothers. When a tiger is about three weeks old it will grow pointed teeth to tear meat. Tigers also have rounded teeth for chewing. Tigers are always learning. They learn to hunt and roar when they are cubs. And they learn to stalk prey when they are grown-ups. This is the lifecycle of a tiger.

1. What do tigers cubs learn to do?_____

2. What can tigers stalk?_
